COMPETITIVE PRICING

REDUCED TRAFFIC VOLUME

REDUCED REVENUE

New Services

Standard Services

- ✓ Monetization of service aware Quality enabled bi-lateral and multilateral multimedia interconnects – Voice, Video, IM
- ✓ Hosted interworking between TDM, Mobile, and IP networks
- ✓ Transcoding as a service

Value Added Services

- ✓ HD voice and video telephony interconnects
- ✓ Interconnection between mobile operators for Rich Communication Services (RCS) interconnections
- ✓ Interconnect IMS interworks for VoLTE roaming

New Market Penetration

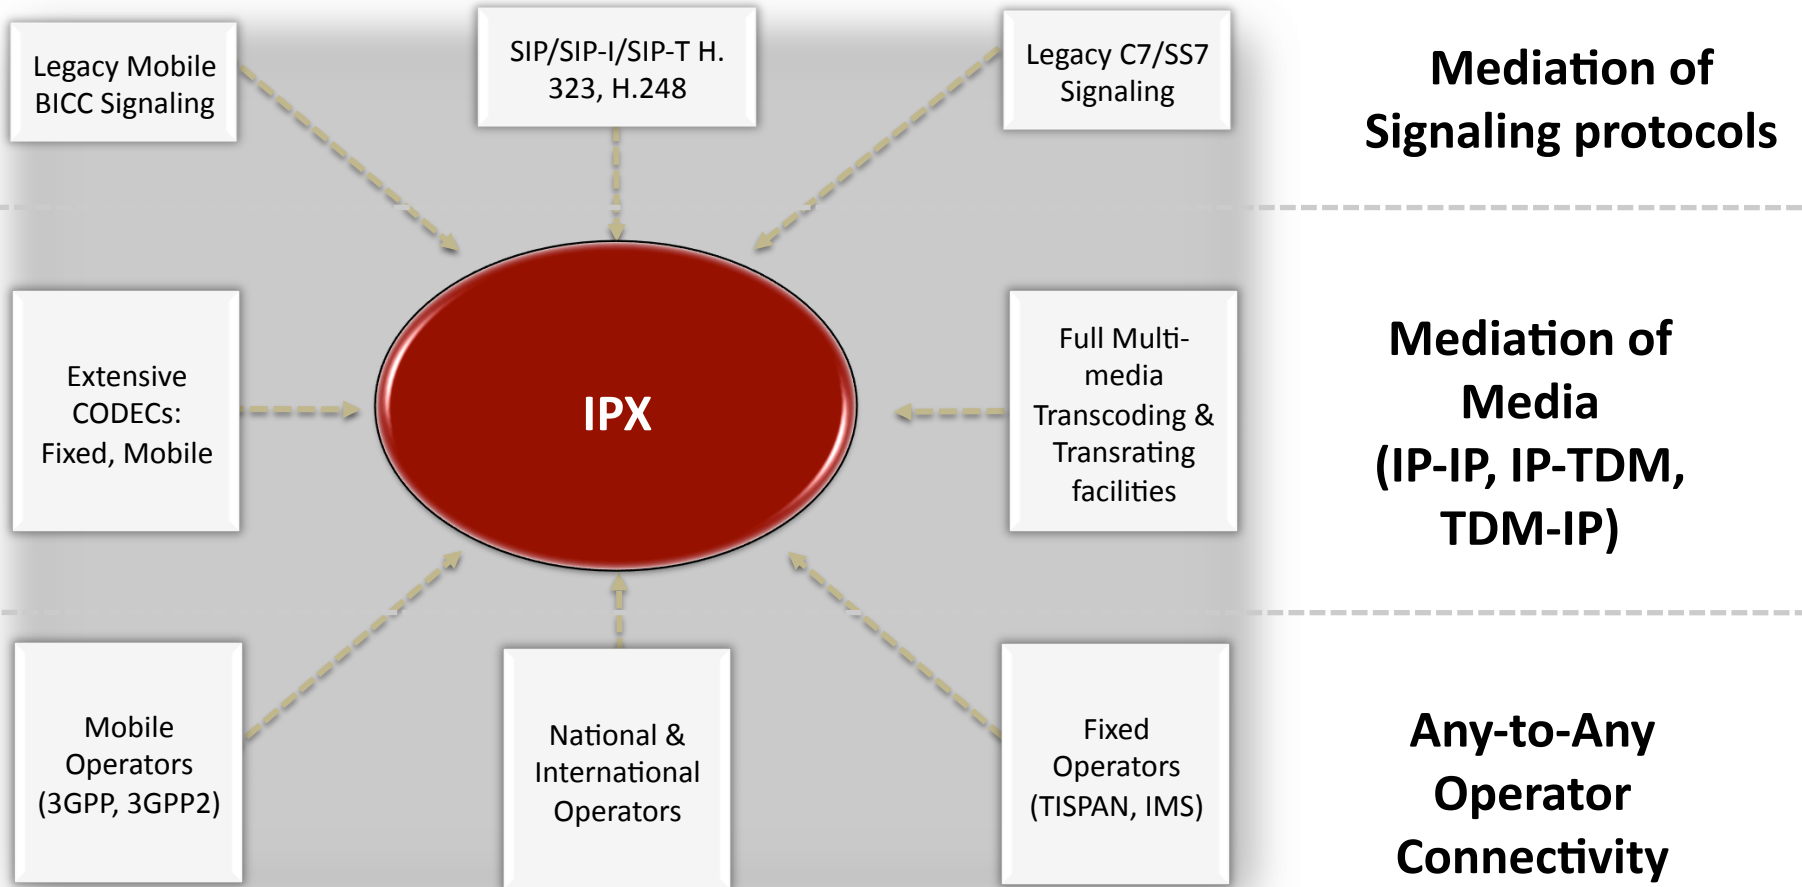

- ✓ Provide direct SIP business trunking services to enterprises
- ✓ Offer federated exchange between enterprises for unified tele-presence

New Business Model

- ✓ Provide managed SBC services to service providers or other wholesale carriers
- ✓ Provide hosted applications infrastructure to service providers
- ✓ Traffic analysis and policy enforcement, CDN, hubbing, etc..

New Service Enablement

New IPX Service = New IPX Requirements

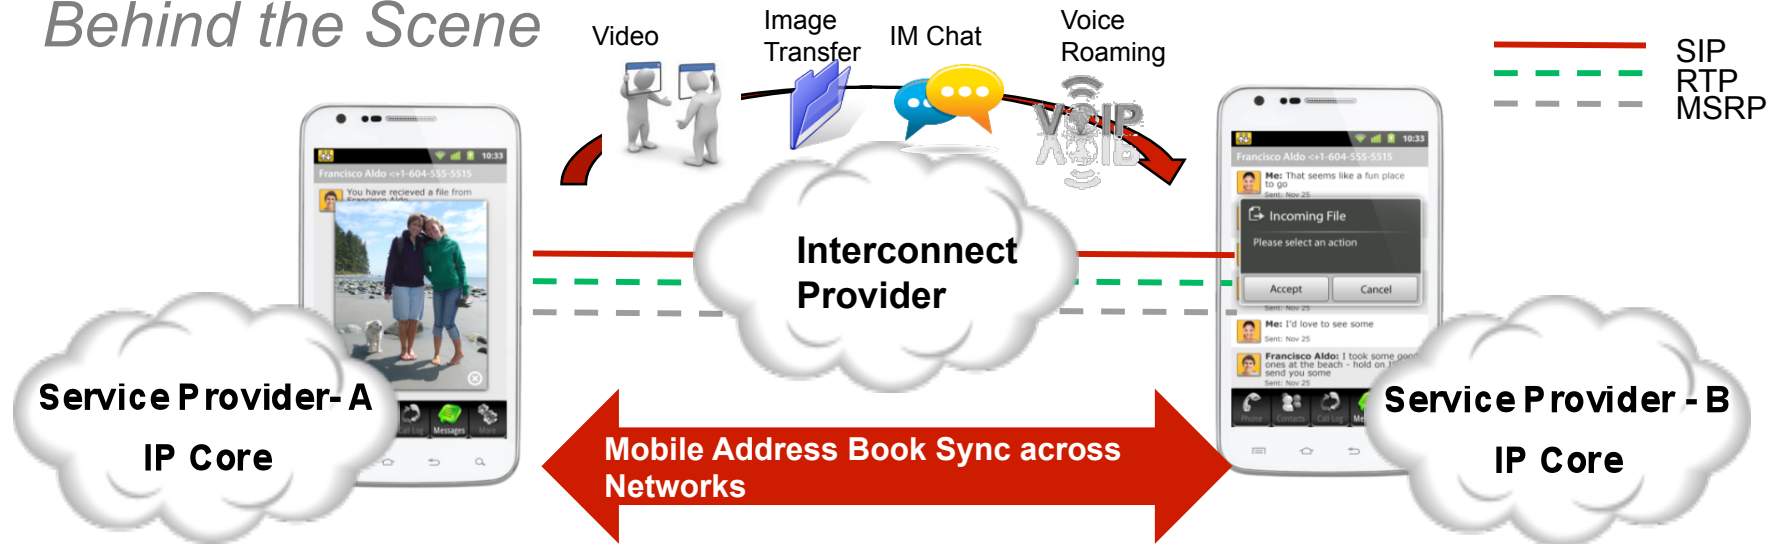

**Consistent Management
&
Visibility**

**Operational
Control**

New Service Enablement –

Behind the Scene

Robust & Adaptive Security

Seamless connectivity across networks

Capabilities exchange across networks

Advanced Reporting & Analytics

Ala Carte Menu Driven Interconnect Policies

- Sell predictable interconnect points
- Select the interconnect profile according to the service provider requirements
- Pricing can be differentiated according to requirements and backed by QOS SLA

Interconnect Type

- VoIP
- TDM
- Data

Signalling

- IETF SIP
- ETSI ISUP
- National ISUP
- BICC

Signalling Map

- ITU
- IETF

Codecs

- G.711
- G.729
- AMR
- ...

Service Type

- Voice
- Video
- IM
- ...

Providing “Predictable” Interconnections

Ensure Service
Availability

- ✓ Secure interconnect borders
- ✓ Highly resilient
- ✓ High performance & scalable

Ensure Service
Interworking

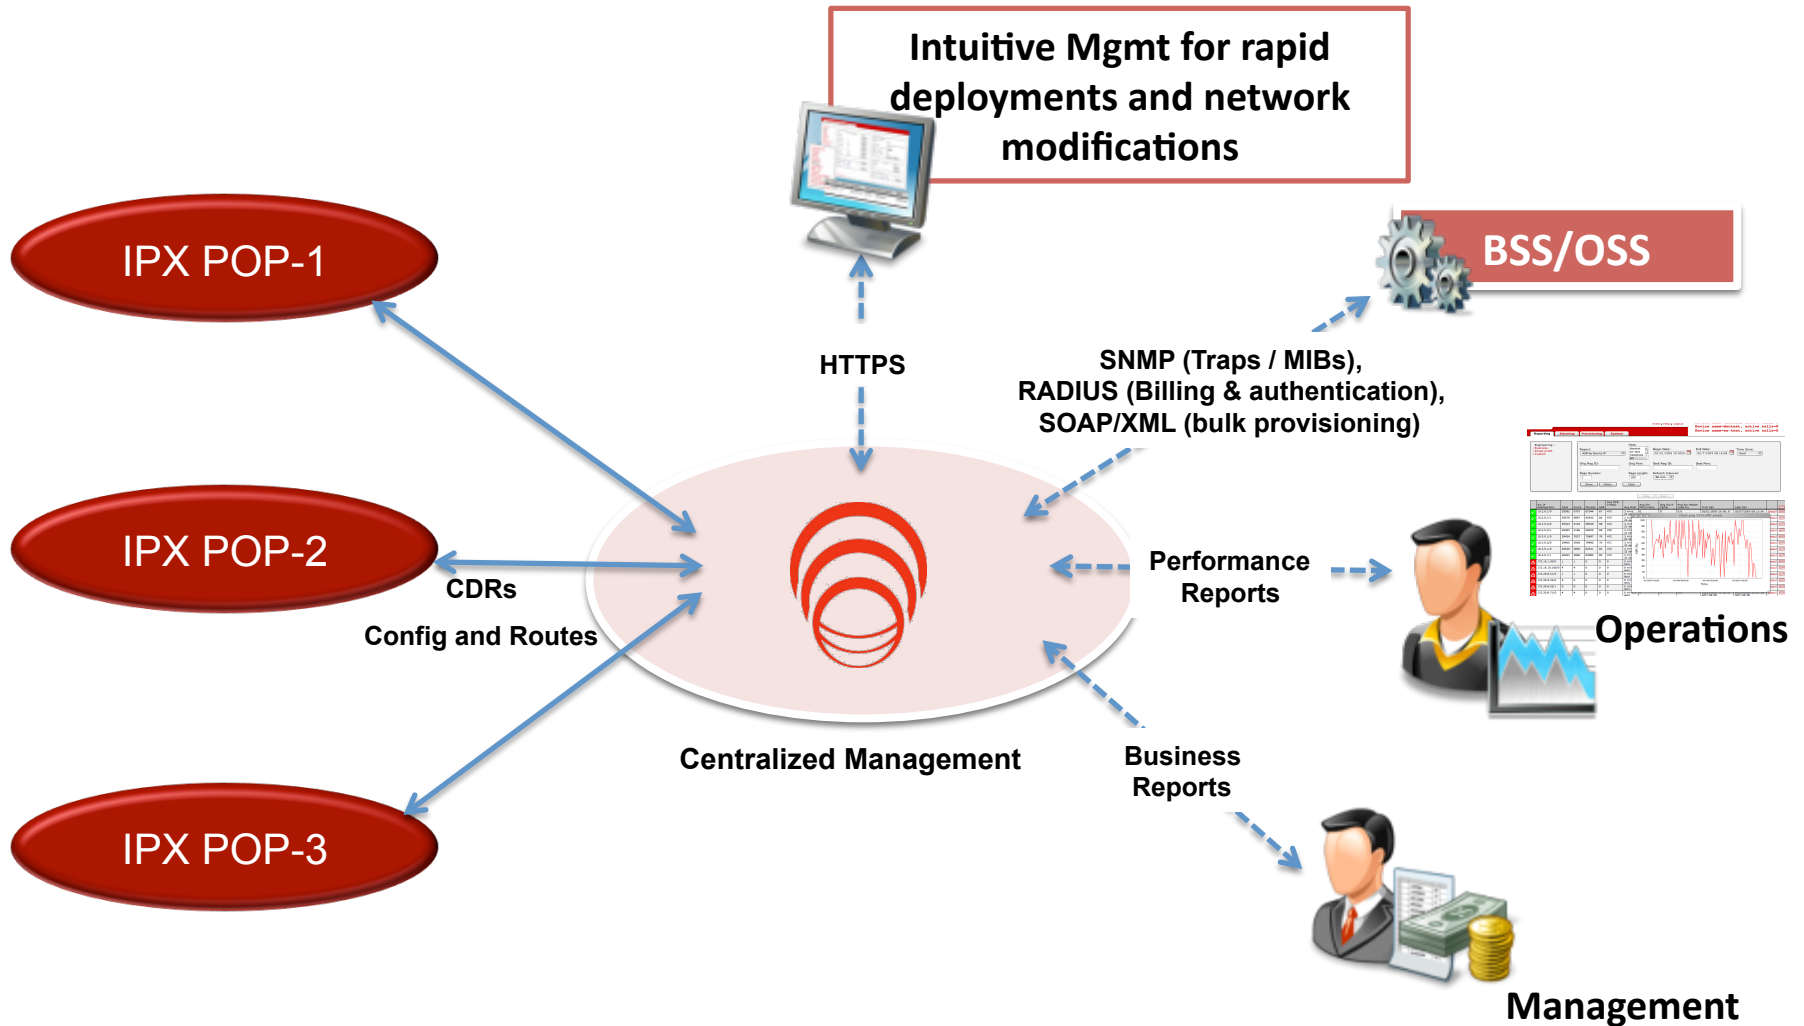

- ✓ Seamless Any-Any mediation of signaling and media
- ✓ Service profiles and connectivity management

Ensure Service
Performance

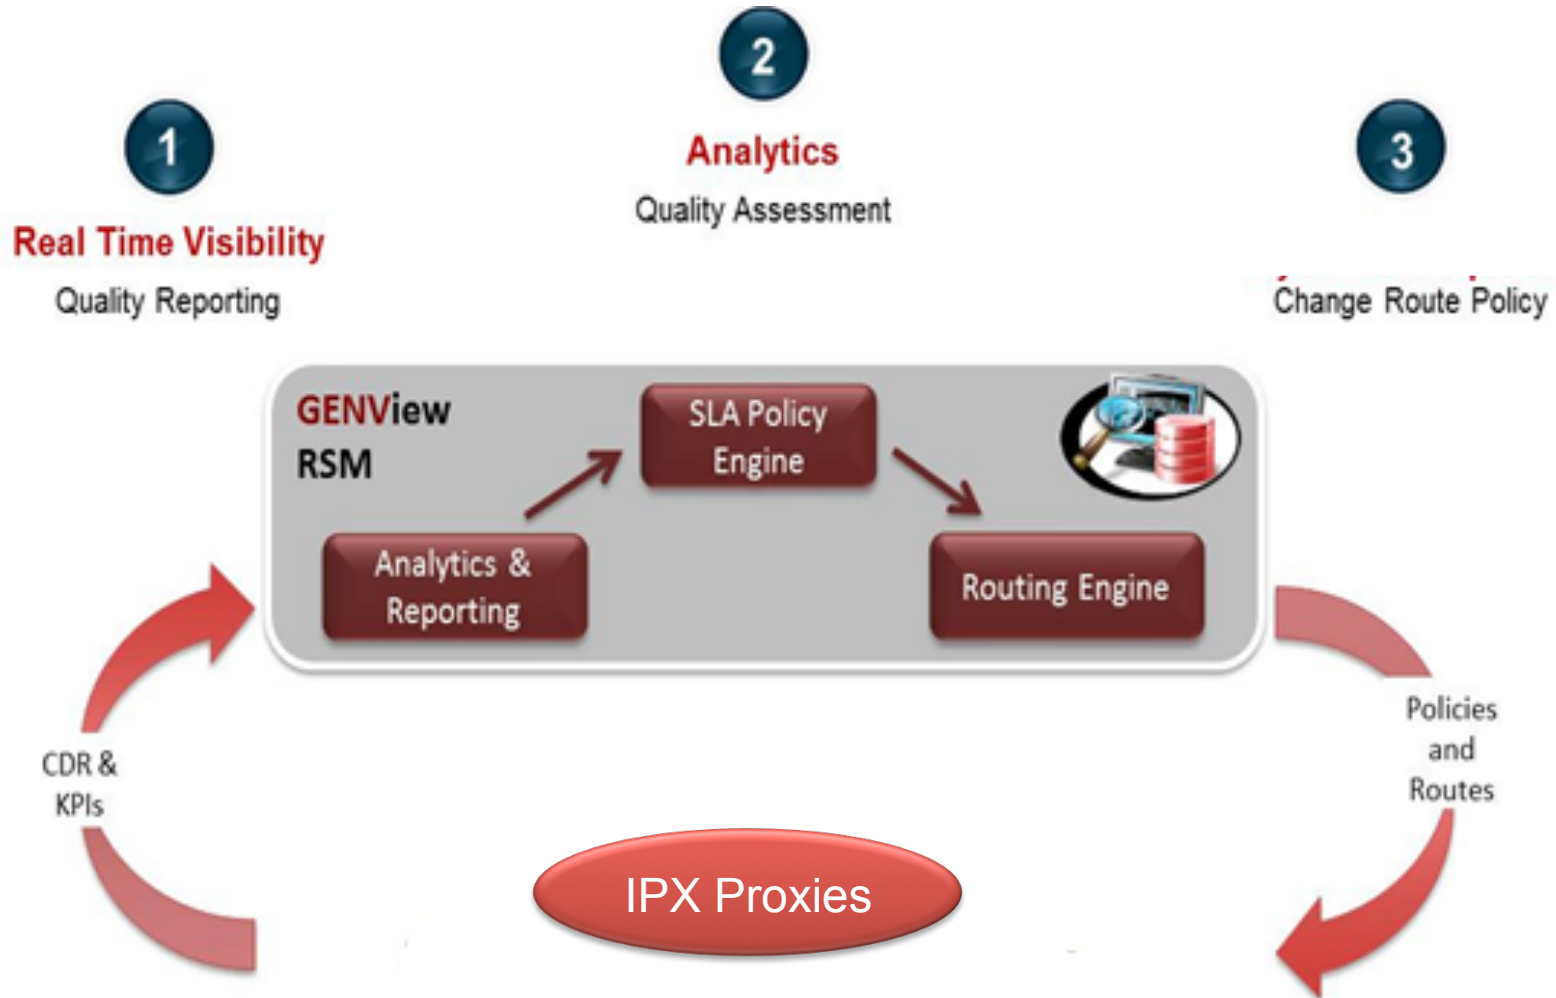

- ✓ Policy driven routing
- ✓ Quality of Service assurance

Manage Interconnect Complexity

Network Wide Policies to Define, Monitor and Enforce Performance Criteria

Predictive Analytics - Dynamic Response

INTELLIGENT POLICY FEEDBACK

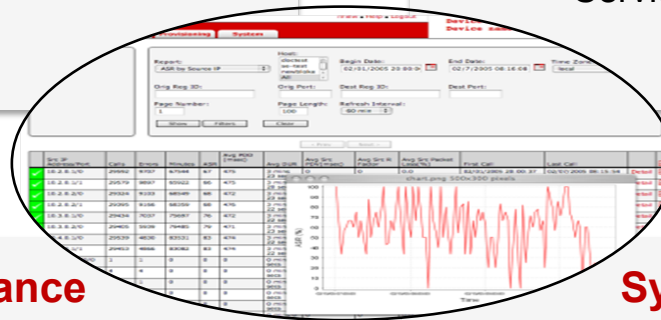

Interconnect With Assurance: Built In KPI

Network Quality

- R-Factor
- Packet delay
- Packet loss
- Packet variance (Jitter)
- Bandwidth allocation
- Admission Control
- Round trip delay

Service Quality

- ALOC (Average Length of Call)
- ASR (Answer to Seize Ratio)
- NER (Network Efficiency Ratio)
- PGRD (Post Gateway Ringing Delay) – Post Dial Delay
- Service Availability

Route Performance

- Network load
- Destination call load and status
- Traffic conditions – Congestion
- Business conditions – Profitability/ Loss

System Performance

- Memory/ Disk Usage
- Interface status
- System health

VISIBILITY INTO SERVICE PERFORMANCE

Real Carriers with Real Challenges

Carrier 1:

- Many vendor components – integration & manageability
- Difficult & costly to scale (specifically routing)
- Lacked Mobile IP interconnect (BICC)

Carrier 2:

- Interoperability with the various networks – SIP, H.323
- Session Management
- Visibility into the Quality of Service being offered
- Connecting cable operator and OTT provider to MNOs

Real Carriers with Real Challenges (continued)

Carrier 3:

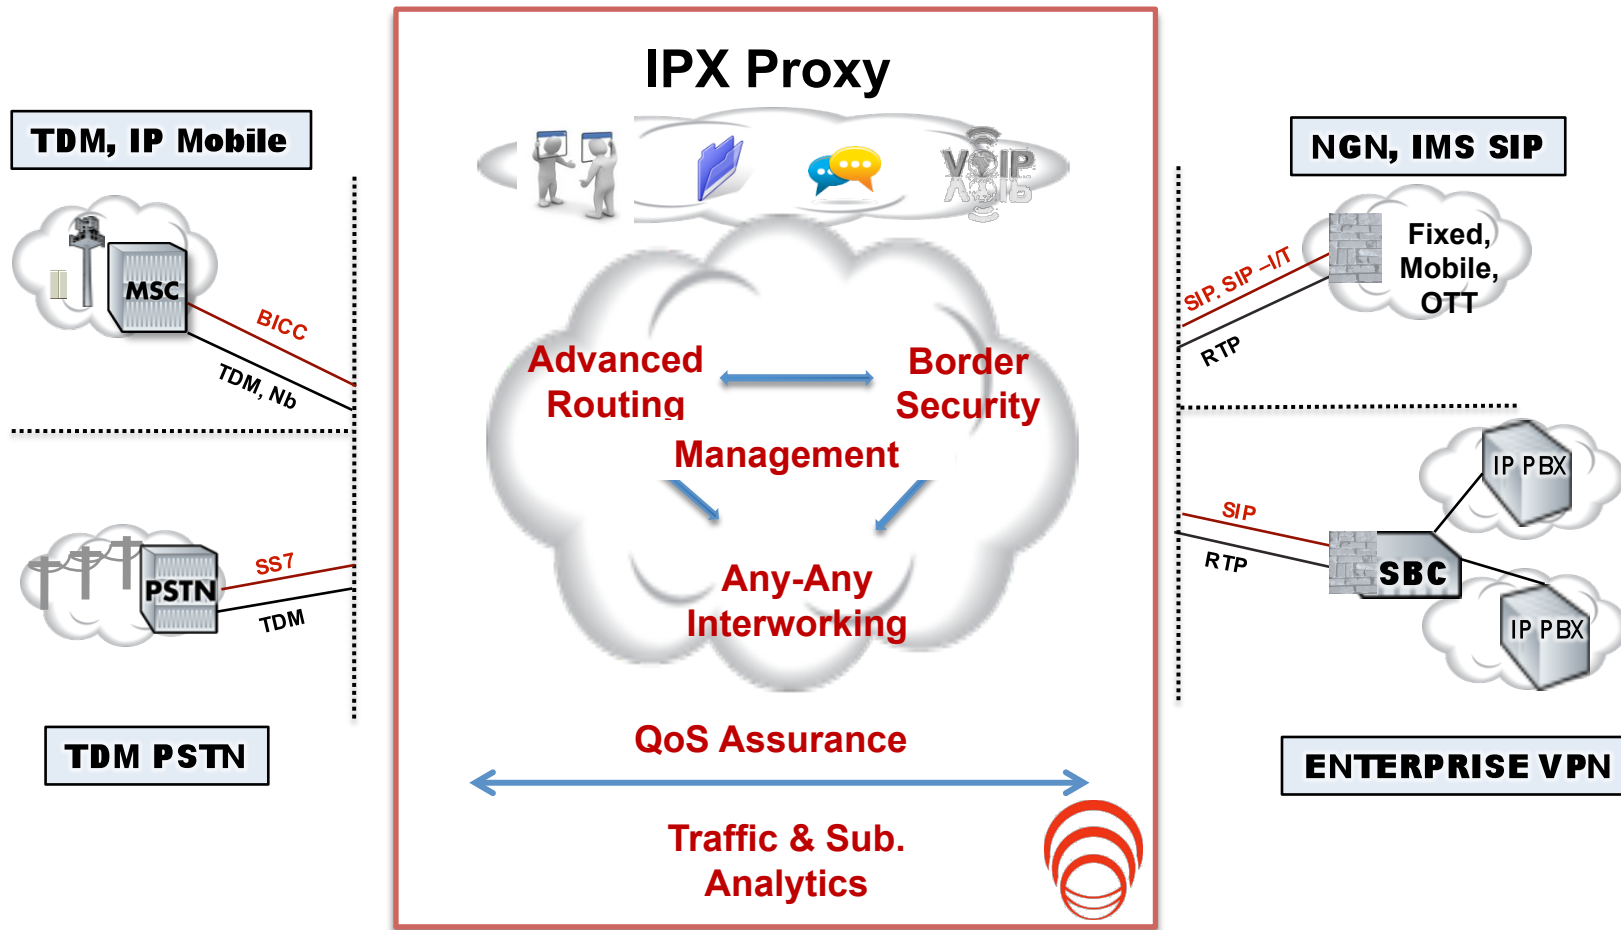

- Large volume of traffic
- Difficult & costly to provision and manage
- Needed to support Microsoft Lync 2010

Carrier 4:

- Needed scalable transcoding solutions
- Needed comprehensive peering & Interworking features – fixed to mobile
- Required advanced routing

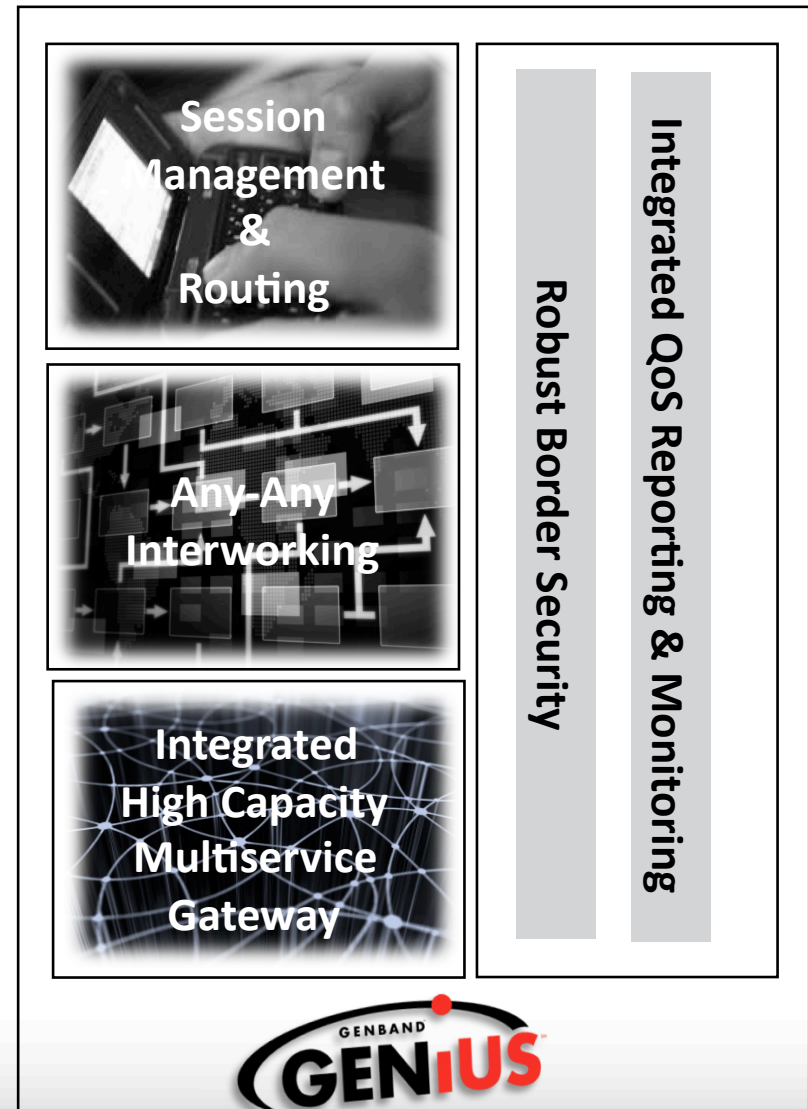

GENBAND Intelligent IPX Proxy

Any To Any Intelligent Interconnect

GENBAND IPX Solution Value

- **Enables scalable commercial offering**
 - Simple Secure Modular Architecture
 - Extends service reach with any to any interconnects – TDM, IP - Mobile, Fixed, Cable, OTT
 - SIP, SIP-I, TDM, BICC
 - High scale and performance
 - Standards compliant
- **Interconnect with assurance**
 - Robust security
 - Any-Any interworking
 - Extensive built in KPI for SLA assurance
- **Simple and Sensible Operations**
 - Centralized management with assurance
 - Manage interconnections not boxes
- **Low Total Cost of Ownership**
 - Network wide licensing
 - Best price performance ratio
- **Turn Key Deployment**
 - We build, operate and transfer your IPX core
 - Industry leading professional services
- **Enables new revenue opportunities**
 - Differentiated services backed by SLAs
 - Future proof: evolve with market needs

Carrier Grade Intelligent IPX Proxy
